

# Fiberglass staff gauge for measuring lagoon depth

<http://www.PumpStoreUSA.com/store/lagoondepthgauges/>

Dimensions:

- 1/8" thick
- 6" wide
- 12' tall

Each staff gauge consists of two individual pieces, each 6" wide by 6' tall. Each piece is manufactured and shipped separately for field assembly.

Each staff gauge consists of black computer-printed letters (using black India ink) screen-printed onto a white Nexus fiberglass surfacing veil. The printed strips of veil are applied with a layer of resin to the 1/8" thick fiberglass boards, which are surfaced with white gelcoat. The gauges are then encapsulated in a layer of clear gelcoat, containing wax and UV inhibitors.

Each gauge is calibrated to show height in feet.

The fiberglass boards are not factory-drilled for mounting, but can be drilled as needed at the jobsite.

All workmanship is in accordance with the NBS PS 15-69 product standard.
